

FitMax™ CPAP Total Face Mask

for use with CPAP and bilevel NIV treatment

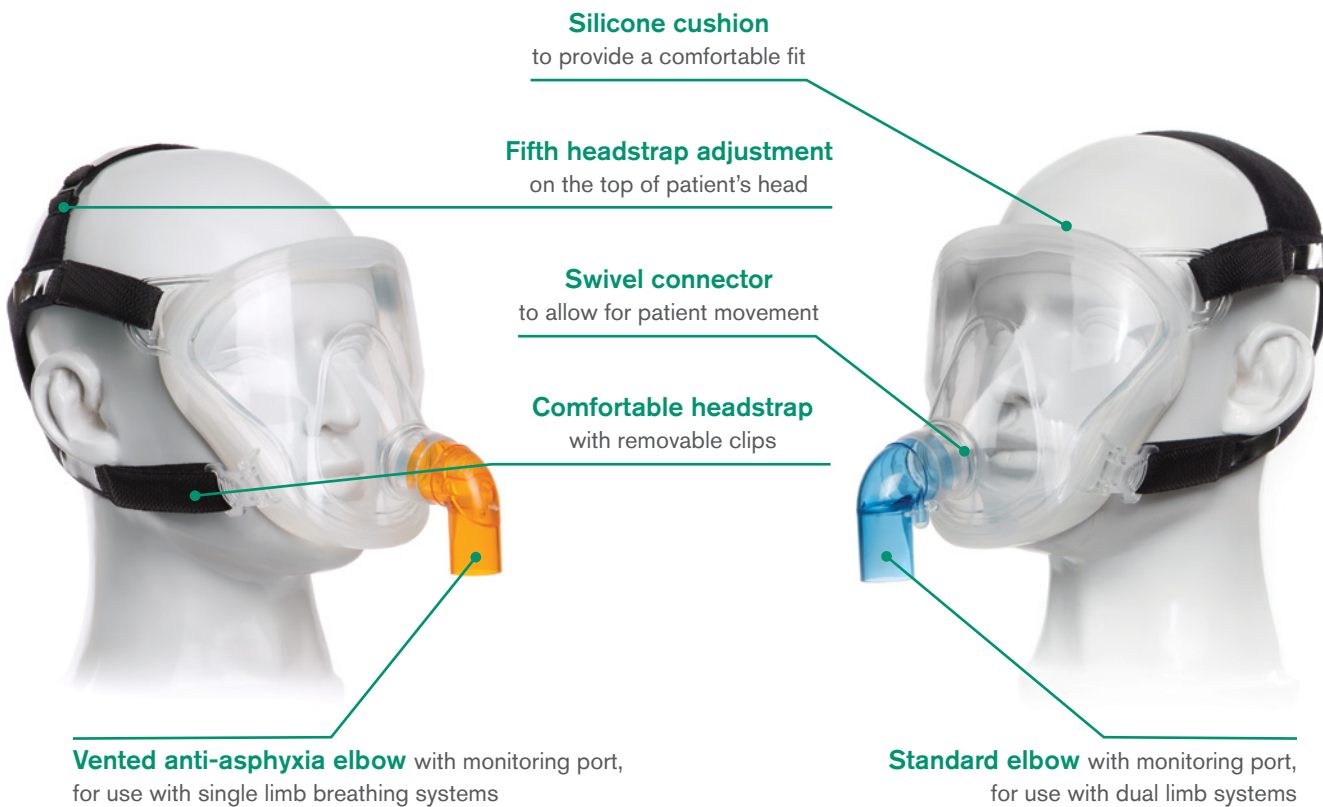

Critical Care ▪ FitMax™ CPAP Total Face Mask

FitMax™ CPAP Total Face Mask

The FitMax CPAP total face mask is an adult (>30kg) single patient use NIV patient interface for use with CPAP and bilevel treatment within the hospital environment. The design of the mask helps to eliminate the nasal bridge issues that can be associated with traditional oronasal masks. The FitMax is easy to fit and is available in 3 sizes for the majority of patients.

Two colour coded elbow options are provided for different clinical situations – an anti-asphyxia elbow with leak port for use with single limb breathing systems and a standard elbow for use with dual limb breathing systems.

Code	Description	Colour coded elbow	Box Qty.
For use with single limb breathing systems
