nFlow Designed to care

The smallest patients often need the most care. Safety and comfort are vital to help infants with their earliest steps in life.

nFlow infant CPAP

The Intersurgical nFlow breathing system offers a complete care solution for infant CPAP with established 'gas flip' technology, providing a low 'work of breathing' option as an alternative to ventilator CPAP.

nFlow is compatible with flow drivers suitable for infant gas flip technology CPAP, with the slightly higher system pressure associated with this treatment.

Spike for reservoir bag The nFlow system A choice of patient interfaces and bonnets The nFlow breathing system (code 4700000) Patient interfaces and bonnets are supplied separately is supplied assembled with generator, to avoid waste. Use the size guide provided to choose heated wire limb, 10mm adjustable Superset the correct option for your patient. style exhaust tube for efficient gas removal, and phthalate free fresh gas and pressure Airway pressure monitoring lines.
